Hansen Industrial Transmissions commits to be a pioneering innovator. The production of high performance gear units stems from an interactive partnership with our clients, the end users and the actively engaged manpower of our global enterprise. Embracing design, manufacturing and customer services, Hansen Industrial Transmissions has grown into a world leader in its field.
Today, we set standards for both product and working environment, inciting a knowing environment to seize all new and inspiring technologies.

powerful solutions for cooling towers and air cooled condensers

Sumitomo Drive Technologies

Hansen® industrial gearboxes

COOLING TOWERS
COOLING TOWERS

COMPLETE AND POWERFUL SOLUTIONS FOR COOLING TOWERS

Because of the severe demands placed on cooling tower fan drives, Hansen Industrial Transmissions' drives are specially equipped to withstand exacting operating conditions, while still using a maximum of standard components. Taking these operating conditions into account, several accessories are included as standard. Hansen Industrial Transmissions designs, creates and services flexible gear units that can be adapted to specific requirements. This way Hansen Industrial Transmissions created a range of drive solutions suitable for the international cooling tower market. Proof of the products' reliability is the ISO 9001 quality certificate, showing outstanding quality, supported by an international network of after-sales Services Centres. Using standard components, we offer a range of gear units fully customised to the specific needs of the industry applications.

cooling tower

HANSEN P4 GEARBOXES

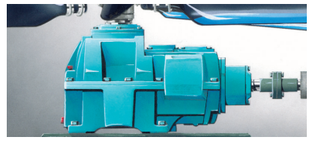

With the P4 gear units, fully customized to the specific needs of the cooling tower industry. We offer a truly functional solution for wet cooling towers and air cooled condensers.
The extended bearing span of the low speed shaft has been standardized to meet the particular needs of these apllications: the extended bearing span invreases the dynamic stability of the gear unit. The unit's low speed shaft bearings are selected to handle the high zxial loads, i.e. the axial thrust from the fan on the low speed shaft. The lubrication system is adapted to very low operation speeds and to windmilling conditions. The overall design of this series of gear units fully complies with the Cooling Tower Institute specifications

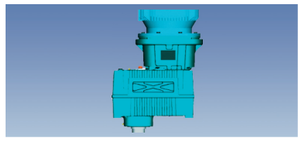

For the wet cooling tower drives, we now offer a range of 11 bevel helical gear unit sizes up to 100 kNm, which allows a more accurate selection. They are all well protected for operation in a very humid environment. The increased distance between the propeller and the high speed input shaft reduces vibrations. A motor can be connected to the outside of the cooling tower using an all-metal disc coupling at the high-speed shaft.

HANSEN M4ACC HELICAL GEARBOXES

Based upon our P4 and M4 technology, a dedicated design has been developed. Applying the same high quality standards, this gear unit offers a cost efficient solution with optimised gear geometry for lower noise levels.
The monobloc concept ensures higher stiffness of the housing.
As a standard, these units come with a lantern housing that allows for connection of a motor on the top of the gear unit.

This model is used mainly in air-cooled steam condensation plants which are ideal in dry environments where water resources are scarce. The cooling fan's motor is located in the air stream of the air-cooled refrigerant condenser.

WHY HANSEN INDUSTRIAL GEARBOXES?

- ***We match the drive to the application and offer proven reliability under the most severe conditions.***
- ***Carburised and ground gearing of both bevel and helical gears excels in strength, torque capacity, surface durability and low noise performance.***
- ***Large overhung load capacity of the gear unit.***
- ***A dedicated bearing confi guration meets the application requirements.***
- ***Bearings and shafts are dimensioned to go the distance, ensuring long bearing life under heavy loads.***
- ***Continuous oil circulation through the bearings ensures a long, trouble-free working life for the gear unit.***
- ***Our P4's unique Oil-Lock™ system offers a maintenance-free sealing on high-speed shaft extensions as a standard.***
- ***A greased labyrinth seal on the low speed shaft prevents water and moisture from entering the housing of the gear unit.***
- ***The drywell prevents oil leakage on vertical down shafts.***
- ***The internal construction of the gear unit housing allows for simple and complete oil drainage.***
- ***Positioning of the aerating, drainage and fi lling plugs makes it easy to connect service piping towards the outside of the cooling tower.***
- ***The larger units can be easily inspected and serviced on the spot, thanks to covers above the oil level.***
- ***One-stop-shopping for complete drive package solutions.***
- ***In-depth engineering support and complete documentation before and after the order.***
- ***Our global service capability significantly reduces downtime.***
